Re: Howard Rd. Switching Station and Transmission Line Project

Dear CPS Energy Customer,

Thank you for allowing us to serve your energy needs. We are writing to update you on the project at 14385 State Highway 16 South to construct a new switching station and reroute existing high-voltage transmission lines. The project supports electric reliability in your neighborhood. We announced the project in a letter dated October 7, 2022.

The project is progressing well and we will incorporate the transmission line portion of the project soon. The majority of the transmission line work will be completed on CPS Energy's property; however, there are a few portions of transmission line that will be rebuilt outside of our property, but within the transmission Right-of-Way.

We do not anticipate any power outages while the work is being performed.

Transmission work is expected to begin October 30, 2023. The contractor, Utility Construction Services (UCS), will replace existing transmission line foundations, towers and wire with new transmission poles and wire. The expected project duration is approximately 1.5 years.

If you have any questions or concerns about this important project, you may contact me at (210) 289-9685 or by email at dtotto@cpsenergy.com.

We appreciate your patience and understanding while we complete this work to better serve you.

Sincerely,

Daniel Otto, P.E., PMP, MBA
