

Who is CPS Energy?

Established in 1860, CPS Energy is the nation's largest community-owned provider of electric and natural gas services. We provide safe, reliable, and competitively priced services to **930,114** electric and **381,379** natural gas customers in San Antonio and portions of seven adjoining counties. Our customers' combined energy bills rank among the lowest of the nation's 20 largest cities while generating \$9 billion in revenue for the City of San Antonio over the last 80 years.

Our Vision 2027 strategic plan is designed to guide CPS Energy through rapid transformational change in our city. As a trusted and reliable community partner, we continuously focus on job creation, economic development, and educational investment. We are powered by our skilled workforce, whose commitment to the community is demonstrated through our employees' volunteerism, our community engagement efforts and programs aimed at bringing value and assistance to our customers.

For more information, visit cpsenergy.com.

How can you follow the progress of this project?

The CPS Energy project team will post project information on the CPS Energy website at cpsenergy.com/infrastructure.

Who can answer your questions?

The website will include regular updates on the project as steps are completed.

Also, you may write, call or email to:

INFORMATION ABOUT THE EASTSIDE SWITCHING STATION PROJECT

What is the Eastside Switching Station Project?

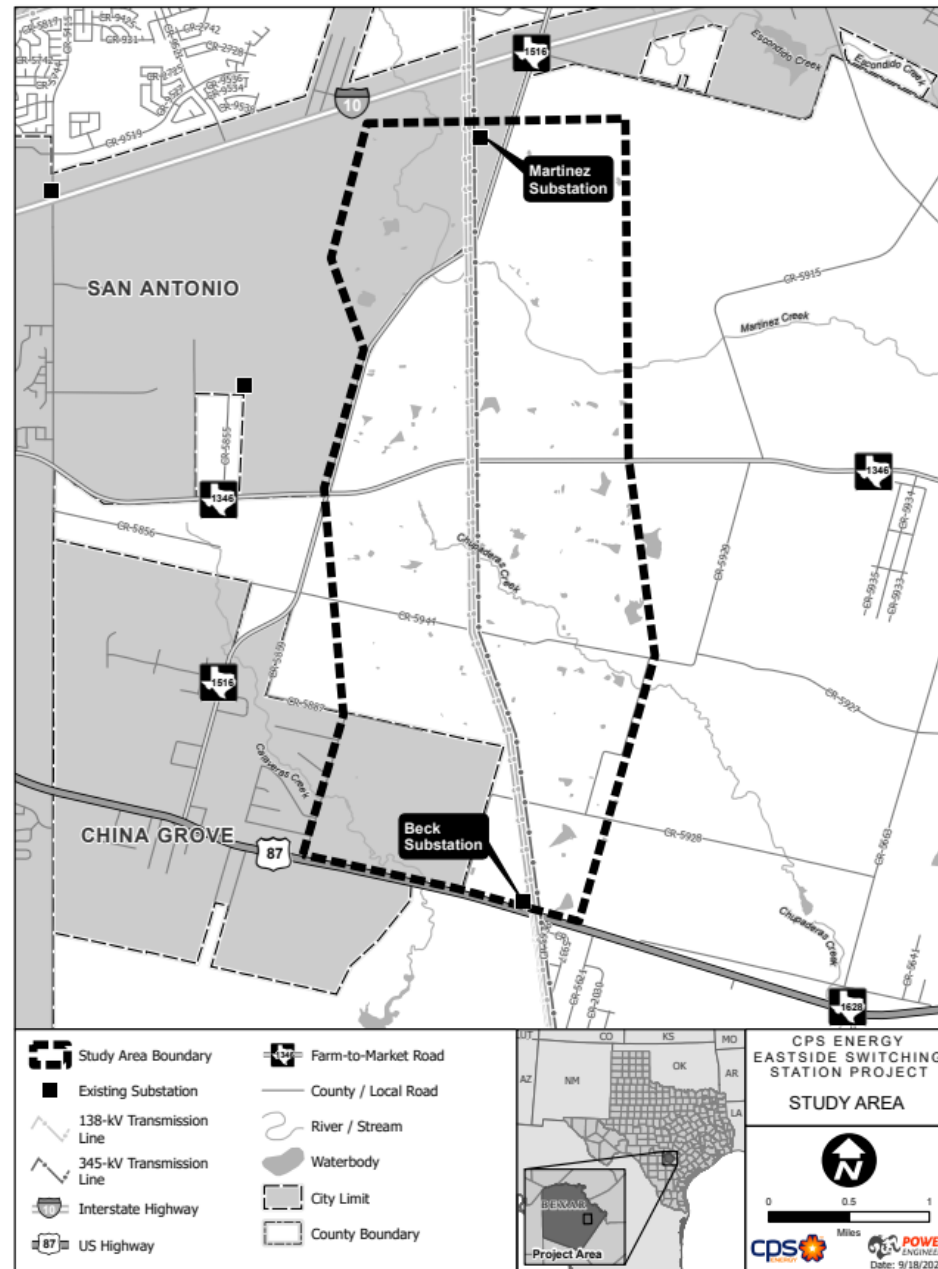

CPS Energy is proposing to construct a new 345kV/138kV switching station in east Bexar County near an existing CPS Energy right-of-way. New transmission line extensions will be built to connect the new switching station to the existing transmission line network. A switching station is used to support switching operations and serves as a hub for transmission lines connecting different parts of the electric grid in the area. Transformation of voltage levels allows power to flow from higher voltage generating units to load serving hubs.

How might this project affect you?

CPS Energy is evaluating multiple means to most effectively build the switching station with minimized impact. Additional right-of-way may be needed to safely reconstruct this switching station. If it is determined to be needed, CPS Energy anticipates purchasing additional property rights from property owners. Your input and feedback are important to our evaluation of the project.

Why is this project needed?

The construction of the switching station is needed to increase the resiliency and reliability of Texas' electric grid by constructing new pathways to increase support of new renewable generation in South Texas and the planned retirement of generation in San Antonio.
